

ID	Name	Description	Priority (1 - Highest, 3 - Lowest)	Rationale		
Accounts						
A1	Account Information	The user shall create an account with the following information:	1	An account is necessary for people to volunteer and ideal to have for victims		
A1.1		-Email	1			
A1.2		-First Name	1			
A1.3		-Last Name	1			
A1.4		-Password	1			
A1.5		-Password shall consist of 8-20 alphanumeric characters and symbols	2			
A2	Guest Access	The user shall have access to a guest account	1	This is convient for victims who don't have time to sign up or login		
A3	Saved Locations	An account user shall be able to save locations	2	Saving location make it easier for users to monitor location of homes or friends and family		
A4	ID	An account user shall be assigned an ID	1	An ID would be helpful to register other users as friends or family members		
A5	Friends	An account user shall be able to register other users as friends	2	This make it easier for the user to monitor friends		
A6	Family	An account user shall be able to register other users as family	2	This make it easier for the user to monitor families		
A7	Emergency Contact Information	An account user shall be able to register emergency contact phone number (see VOL12)	2	If an accident befalls a user, it would allow volunteers to call family or friend to alert them		
Admin						
AD1	Relief request management	The admin shall be able to manage user requests through the following actions:	1	This is important as manual overrides are needed.		
AD1.1		- Change request status	1	The status of a request may be incorrect. For example, the request was accidentally marked completed.		
AD1.2		- Change priority level	2	A request may be more urgent than expected, so the priority level should change.		
AD1.3		-Change shelter designation	1	If a new shelter is created or if a old shelter is gone, an admin should be able to update the designation to let users know		
AD2	User Count	The system shall show the admin how many users are within a 100 mile radius	1	Knowing how many users are in distress is useful in determining how much assistance needs to be sent		
AD3	Account view	An admin account shall be able to view the accounts of user via their ID	1	It is important for admins to keep track of users to designate them as trusted user or ban them for negative behavior		
AD4	Account Bans	An admin shall be able to ban accounts	2	It is important for admins to get rid of user they deem as bad actors (looters/thieves etc) who take advantage of the tracking system		
AD5	Trusted User Assignment	An admin account shall be able to assign users as trusted users	2	An admin can grant special status to trusted users whom victims can rely upon		
Volunteers						
VO01	Volunteer Listing capabilities	A volunteer shall register their capabilities:	1	This allows for volunteers to be tasked with requests they are able to do.		
VO1.1		-Provide food/water	1			
VO1.2		-Provide power tools	1			
VO1.3		-Provide batteries	1			
VO1.4		-Provide medical assistance	1			
VO1.5		-Provide transportation	1			
VOL2	Request view	Volunteer shall be able to view a list of request	1	A list of request can direct a volunteer on where to go next		
VOL3	Request Completion	Volunteers shall be able to mark request as complete	1	Allowing volunteers to mark request as complete lets other volunteer know a job is done and their assistance is no longer required		
VOL4		A completed request will disappear from other volunteer's list of request	1	Prevents volunteers from accepting completed request, saving time for other request		
VOL5		Volunteers shall be able to send relief request on behalf of victims	2	If a volunteer make it to a victim, but they do not possess the faculties to assist them, they can call on additional support		
VOL6		Volunteers shall be able to view relief request within 30 mile radius	1	Provides a default range a volunteer can reasonably travel during a hurricane for rescue targets		
VOL7		Volunteers shall be able to set viewing range to 10 to 100 mile radius	1	Allows volunteer to select their request radius if they are able to reach more or less people		
VOL8		Volunteer shall be able to view victim disabilities	1	This will help the volunteer assist a victim as they can better cater to their needs.		
VOL9		Volunteers shall be able to set notification when a request appear within their range	2	This will let unoccupied volunteers know where to head at a moments notice		
VOL10	Notification Disable	Volunteers shall be able to disable notification	1	If a volunteer is occupied, they can disable notification to concentrate on what they are occupied with		
VOL11	Location Shared	Volunteers shall have their location shared during a storm	1	This lets victims know when a volunteer is coming and let other volunteers know if others are closer		
VOL12	View Emergency Contacts	Volunteers shall be able to see the emergency contacts of the victims (see A7)	2	If an accident befalls a victim, it would allow volunteers to call family or friend to alert them		
Victims						
V1	Disability registration	Victims shall be able to register disabilities	1	This will let volunteers know how to cater to a victim's need		
V2	Request Completion	Victims shall be able to mark request as complete	1	If a victim no longer needs assistance, they can let volunteers and friends/family know that they are safe		
V3	Pet registration	Victim shall be able to register pets	2	This will let volunteers know how to prepare when they reach the victim		
V4	Rescue tracker	Victims shall be to track rescuer location	1	This will let victims know approximately how long it will take for volunteers to reach them		
V5	Communication to Rescuers	Victims shall be able to communicate with rescuer through in app text messages	1	This will let victims communicate details to volunteers regarding their situation or any special percaution volunteers need to take		
V6	Notifications	A victim shall recieve notification when the following occur:	1	This will let vicltns better prepare:		
V6.1		-A hurricane is within 1000 miles of the users location	1	Let would be victims escape before the hurricane arrive		
V6.2		-The nearest shelter has reached capacity	1	Let current vicltns know if a shelter can no longer hold anymore people		
V6.3		-A nearby shelter has spots open	1	Let current vicltns know if a shelter is available		
V7	Notification Disable	A victim shall be able to turn off notification	3	This can let the victim save power in case of emergencies or if they are already rescued		
Shelters						
S1	Shelter Information	The user shall view the following information for a shelter:	1	Users need to know information about the shelter to decide if they should go there.		
S1.1		- Address	1	Users would know where the shelter is.		
S1.2		- Curent occupancy.	1	Users would want to find a shelter that isn't full.		
S1.3		- Amount of resources	1	If a user needs a resource like food or water, they know shelters have them.		
S2	Filtering Shelters	Shelters can be filtered base on their labels	1	This will help users choose which shelter to go to.		
S3	Shelter Labels	Shelters shall have labels:	1	This makes it easier to filter shelters.		
S3.1		-Medical personel present	1	If a user needs medical help they can go to a shelter with this label		
S3.2		-Veterinary care available	1	If a pet needs medical help, users can bring them to shelters with this label.		
S3.3		-Pet Friendly	1	Some shelters may not allow pets, this allows the user to know which shelters allow them.		
S3.4		-Medical supplies available	1	Lets the victim know if the shelter can treat any wounds or sickness they incured		
S4	Shelter Account	Shelters shall register a shelter account	1	It is convenient for people who are managing shelters to have their own accounts to directly update their own information		
S5	Manage max capacity	Shelter accounts shall able to change max shelter capacity	1	Shelters max capacity may change so it necessary to update the max capacity.		
S6	Manage occupancy	Shelter accounts shall be able to updale current capacity	1	Up to date occupancy. count helps users know which shelters have open space.		
S7	Manage Labels	Shelter accounts shall be able to add labels (see S3) to their shelter	1	This will let victims and volunteers know which shelter they should go or bring vicltns to to better suit the victim's needs		

Resources					
RES1	Survival Guides	The app shall be able to display to the user survival guides	1	This will help users prepare for a hurricane.	
RES2	Downloaded Guides	The survival guide shall be downloaded on the app	1	It being downloaded on the app means that a user can access it at any time rather than relying on internet access	
RES3	Guide Information	The survival guide shall display the following information:	1	Important for victims to know how to survive on their own as help may not come soon	
RES3.1		-Administering first aid	1		
RES3.2		-Essential items to bring	1		
RES3.3		-Boarding off areas	2		
RES3.4		-How to stay warm/dry	1		
RES3.5		-Communication without cellular technology	1		
RES4	Item List	The app shall be able to display a list to items useful for hurricane survival	1	This will let would be victims or volunteers to prepare before hand in order to survive any oncoming hurricane	
Relief Requests					
REL1	Relief Request Information	The system shall have relief requests with the following information:	1	Volunteers and responders need information on a request in order to help effectively	
REL1.1		- Requester's name	1	Ideal for helping distiguiush relief requests	
REL1.2		- Location	1	Volunteers and responders will know where the user is in order to help them	
REL1.3		- Request description	1	The system will know who to send for help and what the user needs help with.	
REL1.4		- Priority level (Low, Medium, High)	2	Some requests are more urgent than others so they should be priotize	
REL2		The user shall be able to send an immediate request with one press of a button	1	During emergency situation, there might not be power or internet connection, it is imperative for victims to send request as soon as possible	
REL3	Message Attachment	The user shall be able to add a message to their request	1	This will help volunteers what they need help with.	
REL4	Request Labels	The user shall be able to the following labels to their request:	1	This helps determine the severity of the request and groups requests together	
REL4.1		-Require medical assistance	1		
REL4.2		-Trapped inside building	1		
REL5		The user shall be able to declare how many people are with them	1	This let volunteers prepare before hand in order to accomandate for that many number of victims	
REL6	Requests for others	An account user shall be able to send relief request for friends and family	2	Others may not be able to send a request themselves.	
REL7	Priority assignment	The system shall assign a priority level to a request	2	Having the system assign a priority level allows for accurate labeling since victims may not know the true severity of their request.	
Hurricane					
H1	Hurricane Position	A user shall be able to track current hurricane location	2	This will help users know if they are currently in a hurricane and if it has past.	
H2	Hurricane Path Tracker	A user shall be able to view hurricane travel path	2	This will help users decide whether to evacuate or not.	
H3	Hurricane Information	A user shall be able to view the following hurricane information:	2	Helps the user with determining the serverity of the hurricane	
H3.1		-Hurricane wind speed	2		
H3.2		-Anticipated rain fall	2		
H3.3		-Barometric pressure	3		
H4	Hurricane predicted location	A user shall be able to view anticipated hurricane location at each hour	2	The user will have an idea when and where it arrive next.	
H5		An account user shall be able to view hurricane information (see H3) at saved location (see A1)	2	This allows the user to quickly find hurricane information in areas they are interested in.	
Geographical Region					
G1	Limited Location Tracking	The system shall not track account geographic location during normal weather	3	It is only necessary to track location when there is a hurricane and during the aftermath.	
G2	Map	The app shall have a map that any users can view	1	Users can find where shelters are located and view routes they can take.	
G3	User Hazard Input	The users shall be able to input the following geographical hazards:	2	This allows for hazards to be quickly be listed and helps others know about it.	
G3.1		-Blockage on roads	2		
G3.2		-Flooding	2		
G3.3		-Landslide	2		
G4	Hazards Display	The app shall display user input geographical hazards on its maps:	2	This helps users know where hazards are located, which will allow them to decide possible routes that are safe.	
G4.1		-User input geographical hazard shall appear as a label on where it is located	2		
G4.2		-The labels will start off as a dull red color	3		
G4.3		-The label's color will get brighter with every new user input	3		
G4.4		-Users shall be able to tap on a label and view how many input it recieved	2		
G5	Shelter Display	The app map shall display shelters within 100 mile radius	1	A map displaying shelters will help users find a nearby shelter and how to get there.
